

Enterprise Offerings

Programs

- R1. AI Leadership Program
- R2. AI Competence Development Program

Standalone Offerings

- R3. AI Reskilling Workshop
- R4. Cultivating AI Mindset
- R5. Essential Competencies for AI Leaders
- R6. AI Practitioner Bootcamp
- R7. MS Copilot Studio Application
- R8. AI Specialization Program: Consulting Track
- R9. AI Specialization Program: Compliance Track
- R10. AI Specialization Program: Creative Track
- R11. AI Specialization Program: Domain Track
- R12. AI Specialization Program: Engineering Track
- R13. Exclusive Coaching

Services

- A1. AI Maturity Evaluation
- A2. AI Competence Evaluation
- A3. Enterprise AI Deployment Evaluation
- A4. AI Strategy Workshop
- A5. Operational Readiness Workshop
- A6. AI Compliance Advisory
- A7. AI Technology Advisory
- A8. AI Hackathon

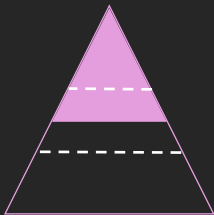

R1

AI Leadership Program

Empowering Leaders to Scale AI

AI Leadership Program

For Upper Middle & Top Management

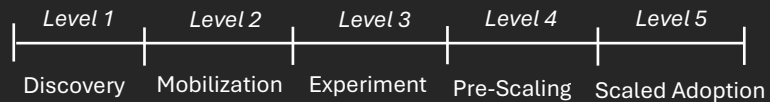

AI Leadership Program

Purpose

To create value by empowering leaders to scale AI

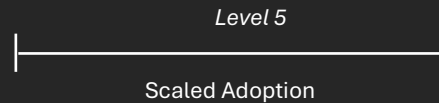

-

Different enterprises are at different levels of AI Maturity

--

Real Value lies in Scaled AI Adoption

Scaled AI Adoption takes on average 3 to 5 years

It requires high investment

And high risk

Leaders should start now by cultivating competencies and focusing on operational readiness

AI Leadership Program

Preparatory Phase

Client Discovery

It involves understanding key processes and workflows, tools, IT environment, business challenges, and AI initiatives of customer through a 90-minute business workshop.

Leaders Connect

It helps to know the leaders better, build trust and commitment, and set the right expectations for the upcoming weeks.

AI Maturity Evaluation

It involves interviews or workshops with key stakeholders and an online assessment. The evaluation report contains the AI maturity level, gaps to be bridged, and identification of areas where AI can be implemented.

AI Leadership Program

Delivery Phase

Leadership Workshop

Day 1 focuses on building a leadership brand and cultivating the essential competencies: growth mindset, empathy, informed decision-making, and fast execution.

Day 2 includes AI strategy workshop and four pillars of operational readiness: customer, technology, data, and people.

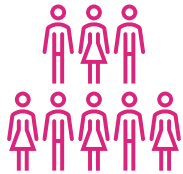

Action Planning & Coaching

It includes co-creating AI reskilling journey with leaders with focus on practical application of skills and concepts learnt in the leadership workshop at workplace.

Ecosystem

It involves onboarding the leaders on to a global ecosystem where they can seek and share knowledge, experience, and best practices with one another.

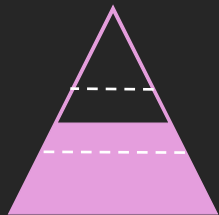

R2

AI Competence Development Program

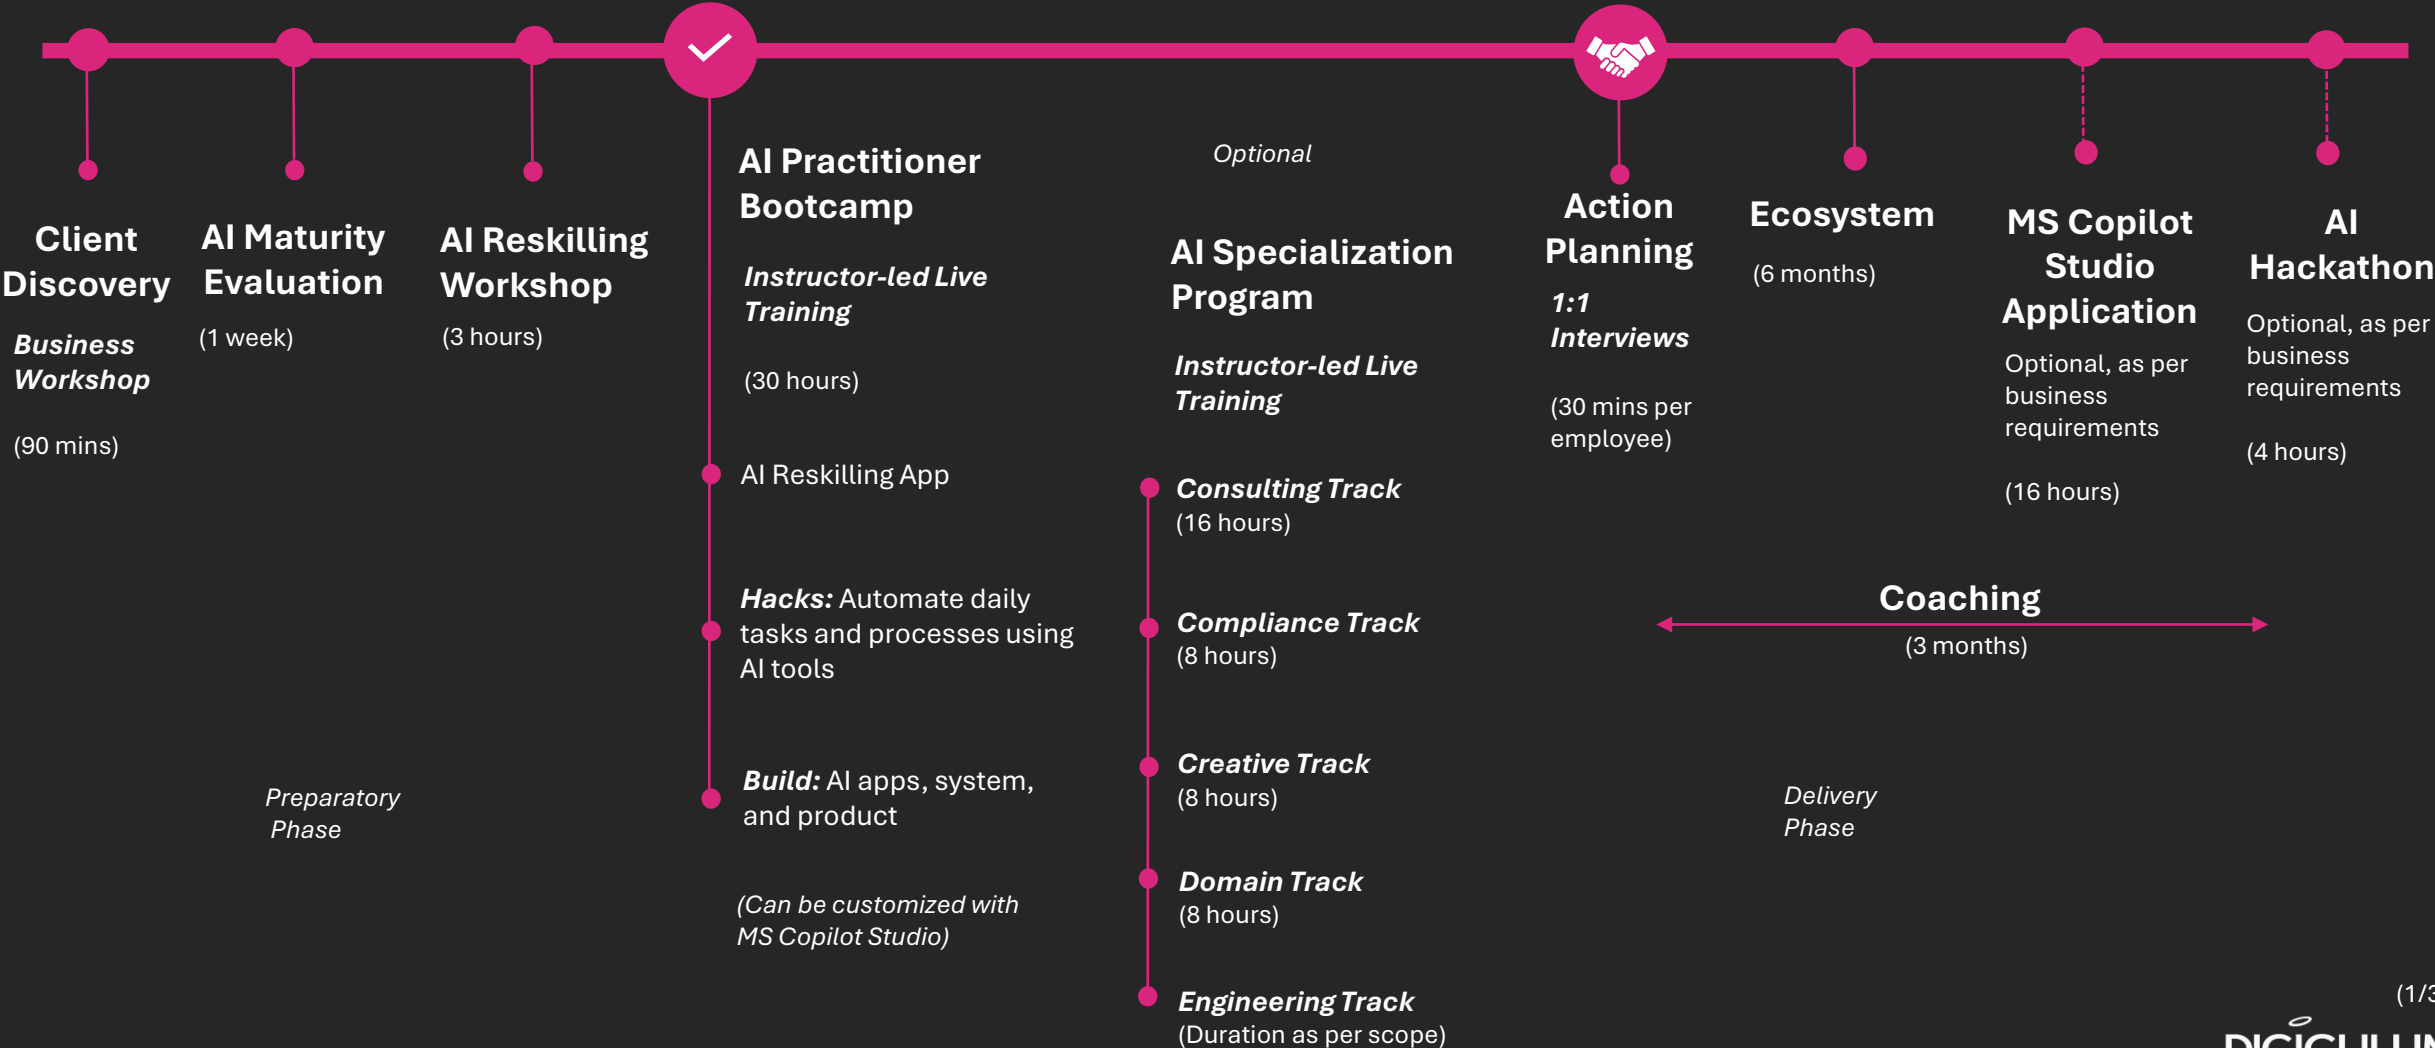

AI Reskilling Journey for Employees

AI Competence Development Program

For Lower Middle & Lower Management

~14 weeks - 6 months

AI Competence Development Program

Preparatory Phase

Client Discovery

It involves understanding key processes and workflows, tools, IT environment, business challenges, and AI initiatives of customer through a 90-minute business workshop.

AI Maturity Evaluation

It involves interviews or workshops with key stakeholders and an online assessment. The evaluation report contains the AI maturity level, gaps to be bridged, and identification of areas where AI can be implemented.

AI Reskilling Workshop

It involves:

- A. Where to start AI Reskilling Journey
- B. Set up target/destination
- C. Introduction to personalized, continuous, and collaborative AI Reskilling Journey.

AI Competence Development Program

Delivery Phase

AI Practitioner Bootcamp

A 30-hour live instructor led training program focusing on the Know, Hack, and Build model for technical and non-technical employees. It trains them on AI concepts, essential tools (MS Copilot, ChatGPT etc.), and building relevant AI apps.

AI Specialization Program

It is the next level to the AI Practitioner Bootcamp that includes five tracks: 1. Consulting 2. Compliance 3. Creative 4. Domain 5. Engineering. Employees can enroll in the tracks relevant to their destination AI roles.

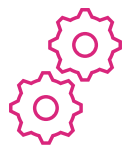

Action Planning & Coaching

It includes co-creating AI reskilling journey with leaders with focus on practical application of skills and concepts learnt in the leadership workshop at workplace.

Ecosystem

It includes onboarding employees on to ecosystem where they can share and seek knowledge, experiences, and best practices from one another.

R3

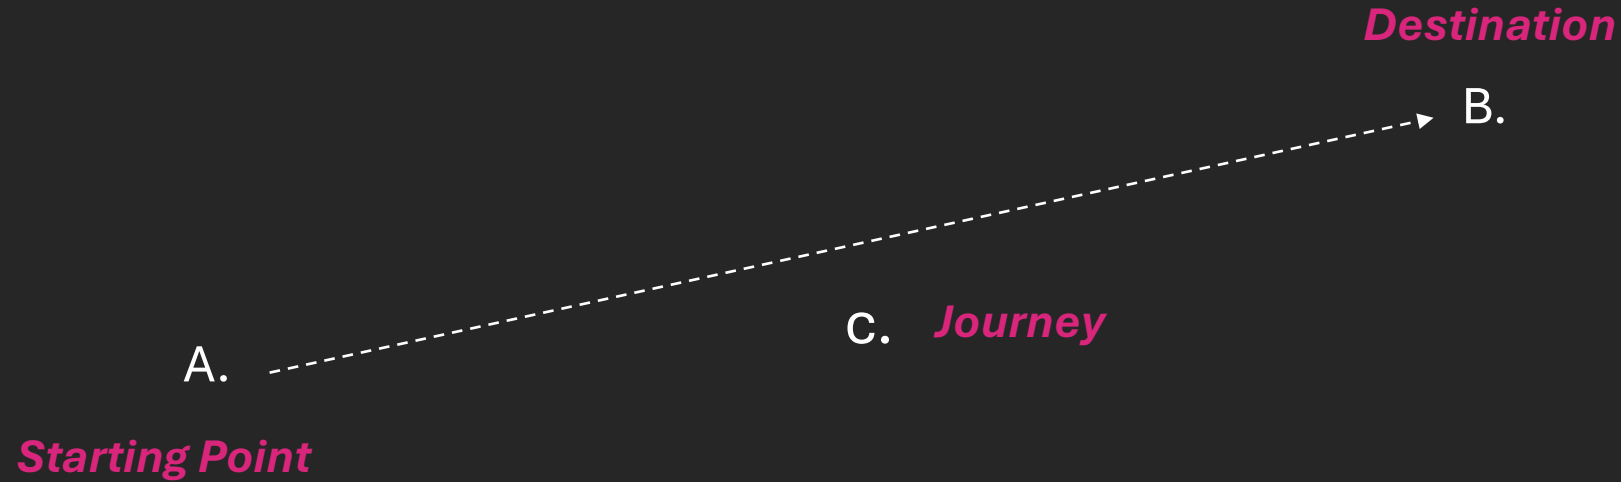

AI Reskilling Workshop

For all Employees

Purpose of the Workshop

To create awareness on A, B, and C

A: Where should I start my AI Reskilling Journey?

B: Where should I be heading to?

C: How do I make my journey valuable?

Workshop Details

Problem

- There is so much AI noise which makes it exceedingly difficult for people to understand where and how they should start learning AI.
- Narratives such as *AI will take away your jobs* add more fear and confusion.

Solution

- Start right by knowing your AI Quotient (AIQ)
- Pickup one of the top 10 AI roles.
- Embark your personalized, continuous, collaborative AI Reskilling Journey.

Workshop Content

- Explore different types of AI noise
- How to cut through them
- AIQ Assessment
- Introduction to Know - Hack - Build model
- Introduction 10 new AI Roles
- How to make your AI Reskilling Journey valuable

Format

- Instructor-driven online or classroom based
- Duration: 3 hours

Target Audience

Employees at middle and lower management

Model

Know--> Hack --> Build

1:1 Consultation

After the workshop, there will be a detailed 1:1 consultation offered to individuals on how to plan their AI Reskilling Journey

Instructor

Amit Prabhu

R4

Cultivating AI Mindset

For all Employees and Leaders

Purpose of the Workshop

To cultivate a mindset which enables you to **learn** and **apply** AI

Workshop Details

Problem

- Many people show resistance to learning AI.
- Few among those who learn can extract real value from it.
- The root cause of this problem lies in one's mindset.
- One's mindset is influenced by the popular AI narratives one is exposed to.

Solution

- One needs to cultivate the right AI mindset that drives curiosity and willingness to learn AI.
- Right AI mindset shapes behaviors that create value.
- Value drives growth and success.

Workshop Content

- Why cultivating AI mindset is important in midst of AI hype and noise?
- Understanding how AI narrative impact one's mindset and behaviors.
- Deep dive into the anatomy of AI Mindset.
- Mindset assessment and case-study
- Framework to cultivate AI mindset

Format

- Instructor-driven online or classroom based
- Duration: 3 hours

Target Audience

People at levels in the organization hierarchy

Mindset Framework

Belief --> Action --> Focus

Post Completion Coaching

After the workshop, there will be 1:1 coaching offered to the individual in cultivating AI mindset.

Instructor

Amit Prabhu

R5

Essential Competencies for AI Leaders

Growth Mindset, Empathy, Informed Decision-making, Fast Execution

Course

Problem

- In the digital era of AI/genAI, customer experience, industry dynamics, business models, competence requirements, project parameters change
- But the leadership required to drive these changes has not changed much
- Most leaders still use the pre-digital style of leadership to drive risky and uncertain AI transformation projects
- This results in their slow adoption or even failure

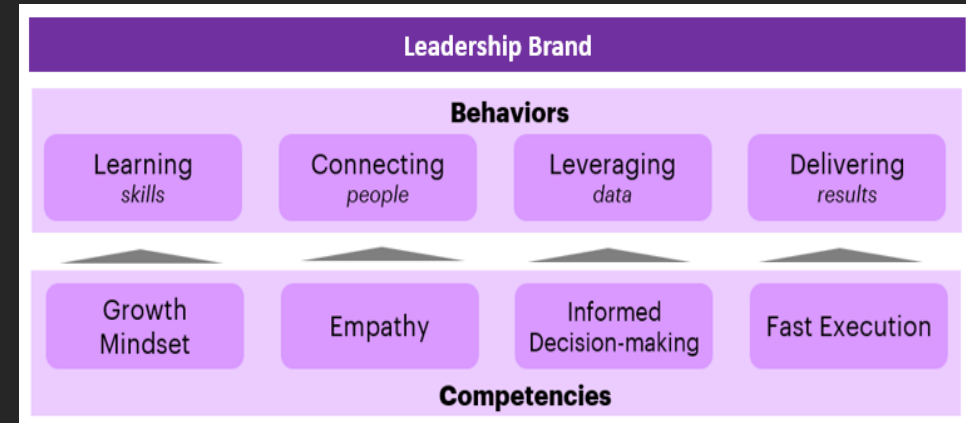

Solution

- To drive AI transformation successfully, a digital leader must demonstrate the following four essential behaviors: **learning new skills, connecting with people, leveraging data, and delivering results**
- Which requires cultivation of the following 4 key competencies: **Growth Mindset, Empathy, Informed decision-making and Fast Execution**
- Each competency uniquely maps to a behavior
- Digital Leadership Framework providing step-by-step guidelines to cultivate these competencies

Format

- Instructor-driven online or classroom based
- Duration: 8 hours
- **Target Audience:** All Leaders/Managers at levels L1,L2,L3 and L4

Digital Leadership Framework

What makes this course unique?

- **Coaching** to ensure practical application of competencies at workplace
- **Call-to-Action** to speed up your organization's AI deployment
- **Content** customization to differentiate from competitors
- **Collaboration** through ecosystem

Instructor

Amit Prabhu

Available on Amazon

Content

Instructor-led, in-person/virtual, 8 hours, 1-2-1 coaching

Need for AI Leadership

- Why are business incumbents struggling to adopt genAI?
- *Predigital* v *Digital* style of leadership

6 facts about AI every leader must know

- Difference between AI, ML, DL, and genAI
- Types of genAI content
- Difference between traditional AI and genAI
- Evolution of LLMs
- Business architecture of genAI
- How GPT works

Developing a Leadership Brand

- 6 different styles of leadership
- 24 AI-conducive behaviors
- Assessing the AI needs of your organization
- Crafting a leadership brand statement

Competency 1# Growth Mindset

- Anatomy of growth mindset
- How a growth mindset drives learning
- Reskilling for 10 new AI/GenAI job roles
- Cultivating a growth mindset

Competency 2# Empathy

- Empathy framework: Think-Feel-Will Analysis
- How empathy drives empowerment
- Using empathy for team building, stakeholder management and influencing, networking, mentoring, and reverse mentoring
- Implementing a 12-week empathy program

Competency 3# Informed Decision-Making

- Avoiding bias traps
- Data driven Decision-making model
- Assessing the right data
- Tackling the most challenging decision: Should we invest in AI/GenAI?

Competency 4# Fast Execution

- The need for speed
- Managing uncertainties using the Act-learn-Build model
- 7 key actions to be taken by AI/Gen Leaders
- Scaling genAI using the Readiness Rocket Framework

Coaching

In the *course*, you will be introduced to:

- **Growth Mindset Cultivation Framework** to ensure readiness to Reskilling for 10 New AI/GenAI Job Roles
- Reinforcing connections with Key AI Stakeholders through **12-Week Empathy program**
- Identifying AI/GenAI **investment areas** based on Informed Decision-Making Framework
- 7 important **scaling actions** to be taken using the Fast Execution and **Rocket Readiness Framework**

In the *coaching*, there will be:

- Commitment **contract** with the Coach
- Continuous **check-ins** on implementation of the four competencies
- Problem-solving and **behavior** building
- Continuous **feedback** on the personal development

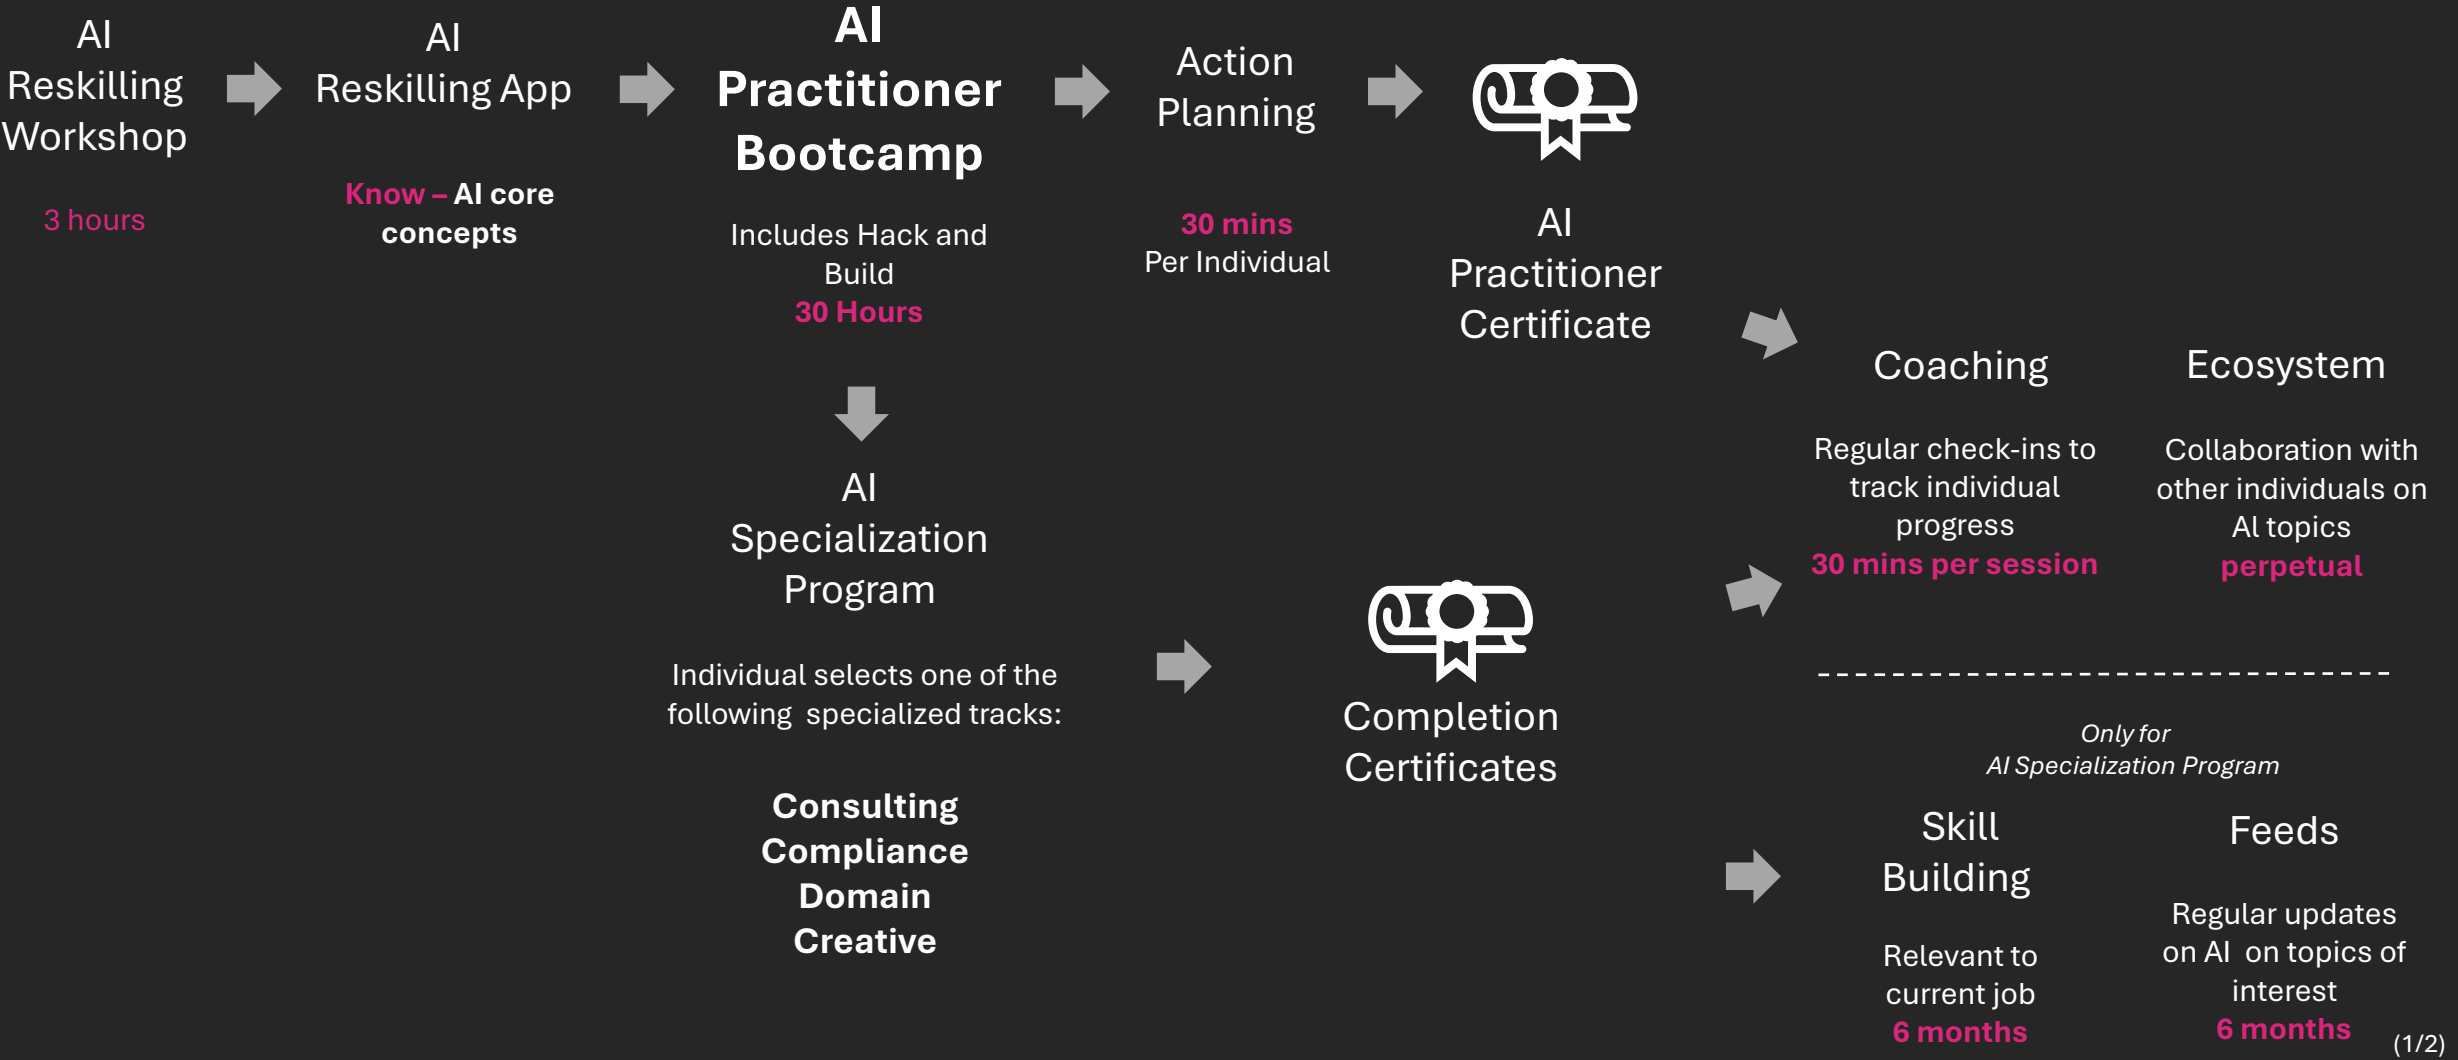

R6

AI Practitioner Bootcamp

Based on Know-Hack-Build Model

Part of Personalized Continuous Collaborative AI Reskilling Journey

⚡ Hack

Video

- Turn text or slides into short videos
- Break long videos into short important clips
- Derive insights from videos
- Capture key images from videos

Text

- Create, summarize, augment a given text
- Rewrite content for different social media platforms
- Auto-generation of emails
- Developing ideation for projects

Image

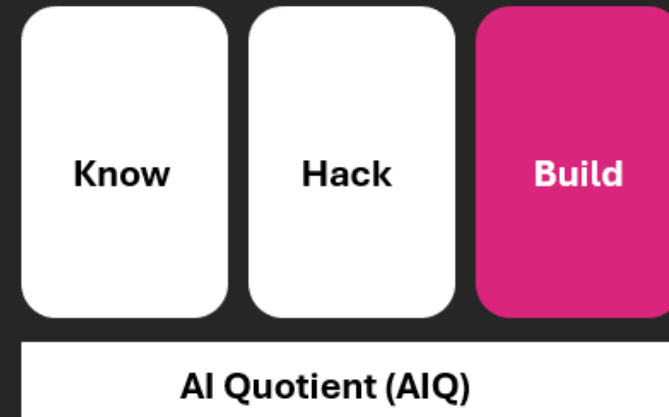

- Creating photo-realistic, artistic, abstract, anime, design, and concept visualization images
- Enhancing images through variations
- Explain concepts and insights via infographics
- Inpainting and Outpainting

Audio

- Create your own music
- Audio and speech enhancement
- Voice cloning
- Convert voice into structured text

🔧 Build

- AI voice agents
- AI clone
- AI as your corporate mentor

The **Know–Hack–Build** model is a framework for measuring an individual's **AIQ or AI Quotient**—the level of AI literacy and capability that will increasingly influence how people are evaluated and hired in the future.

Know — Understand core AI concepts, trends, and use cases that matter for your role.

Hack — Apply AI tools to automate everyday tasks and boost productivity without coding.

Build — Create practical AI apps that improve your work and give you an edge.

R7

MS Copilot Studio Application

The Starting Point for Frontier Firms

Purpose: To automate daily tasks and build AI apps, systems or products

Module 1: Foundations of AI & Copilot (30 mins)

- How Copilot works inside Microsoft ecosystem
- Role of Microsoft Graph
- Difference between copilot v copilot studio
- Enterprise security and data boundaries

Exercise: Identify 3 use cases per participant

Module 2: Copilot for Productivity (4 hours)

- Tools covered: Word, Excel, PowerPoint, Outlook, Teams
- Content:
 - Prompting Fundamentals
 - Writing, summarizing, rewriting documents
 - Data analysis with Copilot in Excel
 - Auto-generating presentations
 - Email drafting and summarization
 - Meeting summaries & action extraction

Exercise: Convert raw notes to report, excel data to insights, ppt from word doc

Module 3: Copilot for Business Functions (2.5 hours)

- Tracks: HR (JD creation, policy drafts), Sales (proposals, client emails), Marketing (campaign content), Finance (summaries, variance explanations)

Activity: Role-based use case simulation

Module 4: Introduction to Copilot Studio (2 hours)

- What is Copilot Studio?
- Use cases: chatbots, internal copilots
- Architecture overview
- Integration with Microsoft ecosystem

Module 5: Building Custom Copilots (3 hours)

- Content:
 - Creating a copilot from scratch
 - Topics, triggers, conversational flows
 - Using generative answers
 - Connecting knowledge sources
 - Testing and refining bots
- Hands-on Lab: Build an HR policy bot or IT helpdesk assistant

Module 6: Automations & Integrations (4 hour)

- Integrate with MS Power apps
- Trigger workflows from copilot
- APIs and connectors
- Building your own agents

R8

AI Consulting

For Technology and Management Consultants

Purpose: To develop consultants who can lead AI-driven transformation from discovery to scaled AI adoption

Prerequisites: Medium AIQ

Module 1: AI Landscape & Value Strategy (2 hours)

- Different types of AI
- Productivity gains and business case
- Relationship between IT, DT, and AI
- Understanding the AI value chain
- Importance of DAC- Data, AI, and Cloud

Module 2: Client Discovery & Problem Framing (3 hours)

- Client information gathering using SPIN
- Building customer journey maps
- Developing use cases, capabilities, and products
- Readiness v use case driven approach

Module 3: Assessments (3 hours)

- Assessing AI maturity of a team, unit, or enterprise
- AI Competence assessment
- Performing customer readiness audit
- Assessing infrastructure
- Compliance, Governance and Risk Management

Module 4: AI Solution Design & Technology Decisions (4 hours)

- Selecting the right LLM
- Fine-tuning V RAG
- Case for LLM curation
- Building AI capabilities
- Green AI
- Reducing technical debt
- Managing data pipeline
- Selecting vendors and ecosystems

Module 5: Scaled AI Adoption (4 hours)

- Operational Readiness Framework
- Business case for scaling AI
- Architecting Centers of Excellence (CoE)
- Building Responsible AI Framework (RAI)
- Developing key AI metrics

R9

AI Compliance

For Legal, Risk, Governance, Compliance SME

Content

8 hours

Purpose: To ensure AI is developed and deployed responsibly

Module 1: AI, IT, and DT (30 mins)

- Three transformation waves
- How AI impacts IT and DT
- How DT impacts AI and IT
- How IT impacts DT and AI

Module 2: Responsible AI Framework (30 mins)

- Need for Responsible AI (RAI)
- Three pillars of RAI
- Deploying Responsible AI

Module 3: EU AI Act in a nutshell (30 mins)

- History and Background
- The EU AI Act
- Obligations for key players
- High risk AI systems

Module 4: AI Audit Framework (3.5 hours)

- Scope of AI Audit
- Frameworks and standards
- Controls
- Types of Audit

Module 5: Conducting an AI Audit (3 hours)

- Introducing the 5-step framework
- Implementing step 0
- Implementing steps 1 to 3
- Implementing steps 4 and 5
- AI Audit best practices

R10

AI Creative

*For Digital Marketing SME, Content Creators,
Designers*

Content

8 hours

Purpose: To develop best-in-class VITA (video, image, text, audio) content

Module 1: Text (30 mins)

- Create, summarize, augment a given text
- Rewrite content for different social media platforms
- Auto-generation of emails
- Developing ideation for projects

Tools: ChatGPT, Gemini

Module 2: Image (30 mins)

- Creating photo-realistic, artistic, abstract, anime, design, and concept visualization images
- Enhancing images through variations
- Explain concepts and insights via infographics
- Inpainting and Outpainting

Tools: Gemini Nano Banana, ChatGPT Images

Module 3: Audio (30 mins)

- Create your own music
- Audio and speech enhancement
- Voice cloning
- Convert voice into structured text

Tools: Suno, ElevenLabs

Module 4: Video (30 mins)

- Turn text or slides into short videos
- Break long videos into short important clips
- Derive insights from videos
- Capture key images from videos

Tools: Seedance, NotebookLM, KlingAI

Module 5: Videos using AI clone (3 hours)

Tools: HeyGen

Module 6: 1-min Short film using AI (3 hours)

Tools:

Script writing: ChatGPT, Gemini

Videos: Seedance, Kling AI

Post-production: Filmora

R11

AI Domain

*For Non-Technical Professionals
(HR, Finance, Accounting, Sales)*

Content

8 hours

Purpose: To develop domain experts who can lead AI-driven transformation from discovery to scaled AI adoption

AI Domain track contains **Common module** + **HR/Finance/Accountants/Sales Module** **Prerequisites:** AI Practitioner Bootcamp

Common Module (1 hour)

- How AI is transforming the domain
- Key workflows in the function
- Inter functional workflows
- Measuring productivity gains

HR Module (7 hours)

Key Use Cases

- Job description generation
- Resume screening & candidate matching
- Interview question generation
- Employee engagement surveys analysis
- Policy drafting & HR documentation
- Learning & development personalization

Hands-on components

- Build JD
- Automating hiring workflow
- Resume summarization system
- HR Chatbot (policies, FAQ)

Project: AI-powered hiring assistant

Finance Module (7 hours)

Key Use Cases

- Financial report summarization
- Variance analysis (actual vs forecast)
- Invoice processing automation
- Expense categorization
- Risk & anomaly detection
- Budget forecasting support

Hands-on components

- Analyze Excel data using AI
- Automate financial commentary generation
- Build finance assistant bot

Project: AI-powered financial assistant

Accountant Module (7 hours)

Key Use Cases

- Tax computation assistance
- Audit documentation & checklist automation
- Regulatory compliance summaries
- Contract review (clauses, risks)
- Financial statement analysis
- Client advisory reports

Hands-on components

- AI for audit workflows
- Tax advisory assistant
- Document intelligence (contracts, filings)

Project: AI-powered audit & compliance assistant

Sales Module (7 hours)

Key Use Cases

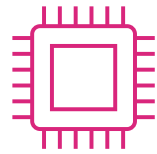

- Lead qualification & scoring
- Sales email drafting & personalization
- Proposal generation
- CRM insights extraction
- Forecasting support

Hands-on components

- AI-driven sales outreach
- Proposal generation workflows
- Sales copilot integrated with CRM

Project: AI-powered sales assistant

R12

AI Engineering

For Developers, Engineers

AI Engineering

- It is a highly customizable program whose duration depends on the business requirements.
- Each module contains projects or hands- on product development of apps, systems or products
- Enterprises can select from the following modules:

Module 1: Python Programming

Module 2: Vibe Coding/ AI-assisted coding using Claude Code, Codex

Module 3: Machine Learning

Module 4: Computer Vision

Module 5: Natural Language Processing (NLP)

Module 6: Deep Learning

Module 7: RAG

Module 8: Fine-tuning

Module 8: Agentic AI

R13

Exclusive Coaching

Extracting value through applied AI

Coaching

- Most enterprises have already invested in AI training, but those programs were generic, one-size-fits-all, and delivered as one-off sessions.
- As a result, teams understand concepts in theory, but struggle to apply them meaningfully in their day-to-day work.
- The real gap is not knowledge—it is **application, contextualization, and continuity**.
- This coaching program steps in after training to bridge that exact gap by working with teams on their **real business problems and workflows**.
- It focuses on helping individuals and teams apply what they've learned, while identifying and closing any missing capability areas along the way.
- Instead of isolated sessions, it provides **ongoing, guided coaching**, ensuring learning translates into consistent action and measurable progress.
- The outcome is simple: organizations move from **AI awareness to actual business impact**, unlocking value from the investments they have already made.

A1

AI Maturity Evaluation

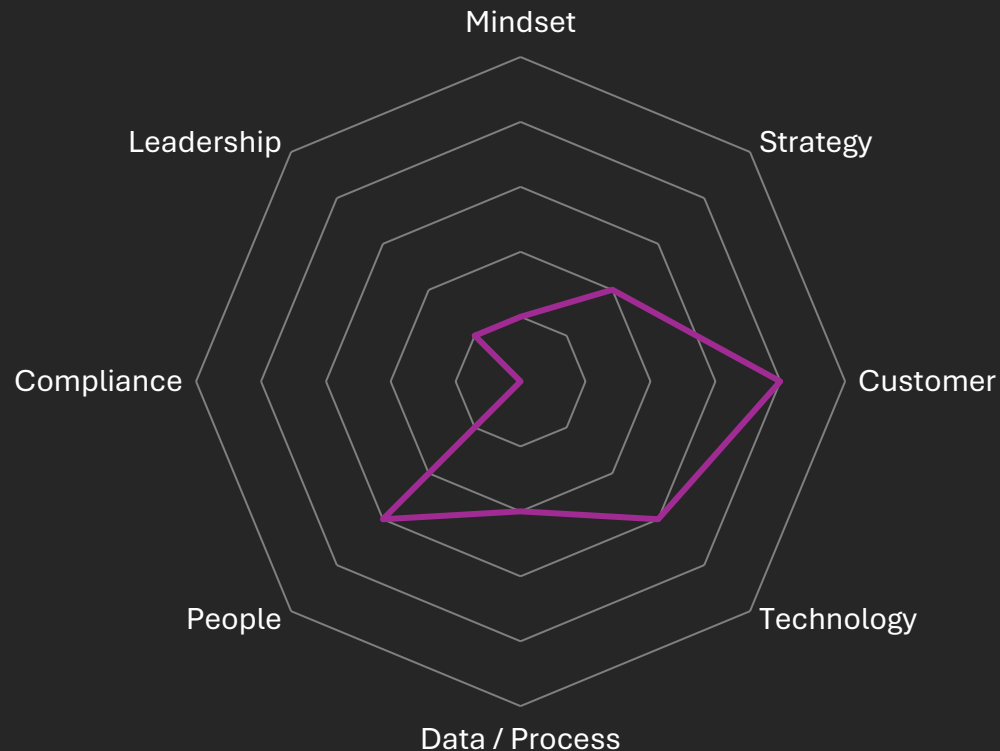

Based on 8 important factors

AI Maturity Evaluation

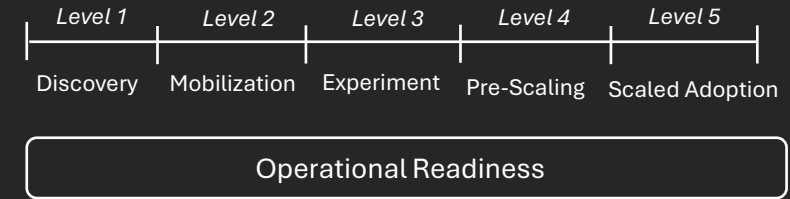

Purpose

- To assess whether an enterprise is ready to scale AI by evaluating its current AI maturity level.
- It identifies gap and recommends key actions to enable scaled AI adoption

AI Maturity is based on 8 factors

AI Maturity Levels

- Discovery – An enterprise is just beginning to consider implementing AI pilots or use cases. No major decisions or actions. They may or may not invest in operational readiness.
- Mobilization – An enterprise decides to implement AI pilots or use cases. They may or may not invest in operational readiness.
- Experimentation – An enterprise implements AI pilots or use cases. They may or may not invest in operational readiness.
- Pre-Scaling – An enterprise successfully implements one or more AI pilots or use cases and wants to scale them enterprisewide. They may also consider implementing an AI solution at a wider scale, completely skipping the piloting phase. They need to invest in operational readiness in parallel or be operationally ready.
- Scaled Adoption – At this level, an enterprise begins to scale AI enterprisewide.

Deliverable

AI Maturity Evaluation Report

A2

AI Competence Evaluation

Creating a roadmap to 10 new AI roles

AI Competence Evaluation

Purpose

- To assess AI competence of people in a team, unit, or entire organization.

AI Competence is calculated based on

1. AI Quotient (AIQ)
2. AI Skills-Role Gap Analysis

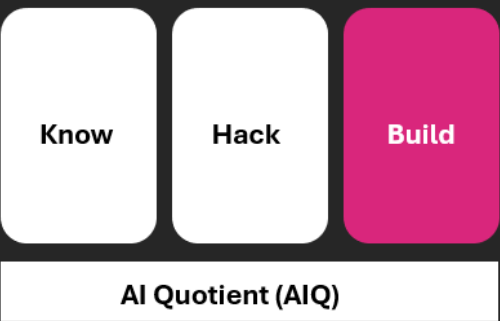

Following legend is used to map a level to the rating:

AI Competence Rating	AI Competence Level
0 < rating ≤ 1	Very Low
1 < rating ≤ 2	Low
2 < rating ≤ 3	Medium
3 < rating ≤ 4	High
4 < rating ≤ 5	Very High

Deliverable

AI Competence Evaluation Report

AIQ is based on Know-Hack-Build model

Know — Understand core AI concepts, trends, and use cases that matter for your role.

Hack — Apply AI tools to automate everyday tasks and boost productivity without coding.

Build — Create practical AI apps that improve your work and give you an edge.

AI Skills-Role Gap Analysis Template

Current Role	Current Skill	Bridging Gap	AI Role	AI-related Skills
--------------	---------------	--------------	---------	-------------------

A3

Enterprise AI Deployment Evaluation

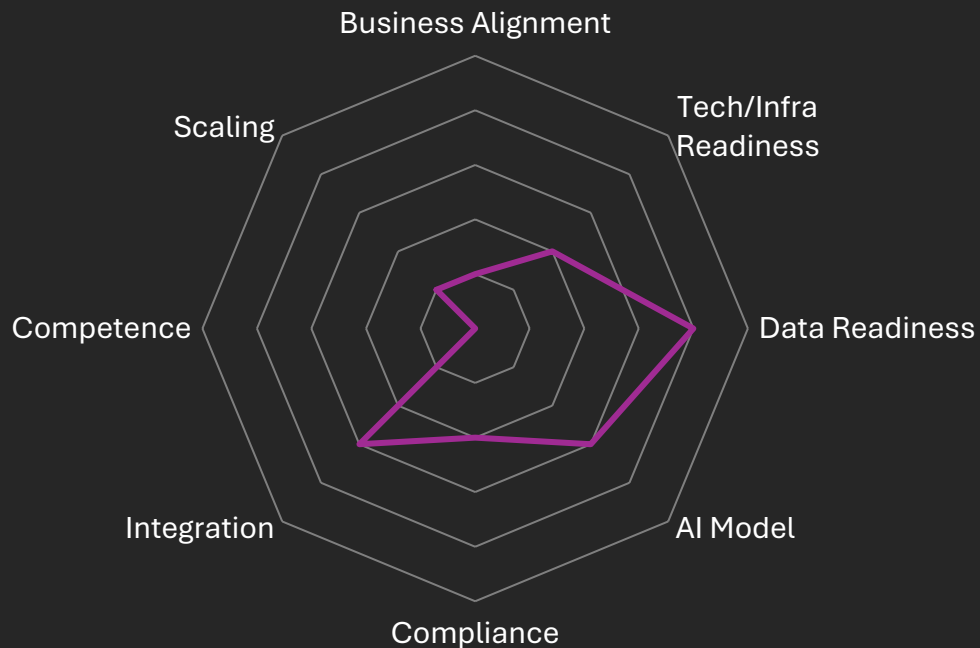

Assessing pre-integration AI Readiness

AI Deployment Evaluation

Purpose

- To assess whether your customer enterprise is ready to accept your AI into its IT environment OR
- To assess whether your enterprise is ready to accept vendor's AI into your IT environment

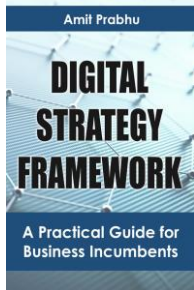

AI Deployment Evaluation is based on 8 factors

- Business Alignment – Are we solving the right problem?
- Tech/Infra Readiness – Can our environment support AI deployment?
- Data Readiness – Do we have the right data to power AI?
- AI Model – Is the AI solution deployment ready?
- Compliance – Is AI compliant and safe to deploy?
- Integration – Will AI fit into real workflow?
- Competence – Are people ready to use AI?
- Scaling – Can the AI scale or align with our scaling strategy?

Deliverable

Enterprise AI Deployment Evaluation Report

A4

AI Strategy Workshop

Based on the book Digital Strategy Framework

Workshop

Problem

- Most of the global business incumbents have embarked on the AI transformation journey
- Only a few have clarity where they are heading and what they want to do
- Most of them deployed AI pilots and agents without a scaling strategy
- As a result, 90% of them will not make it to production
- And those with a scaling strategy, normally don't have a comprehensive end-to-end framework

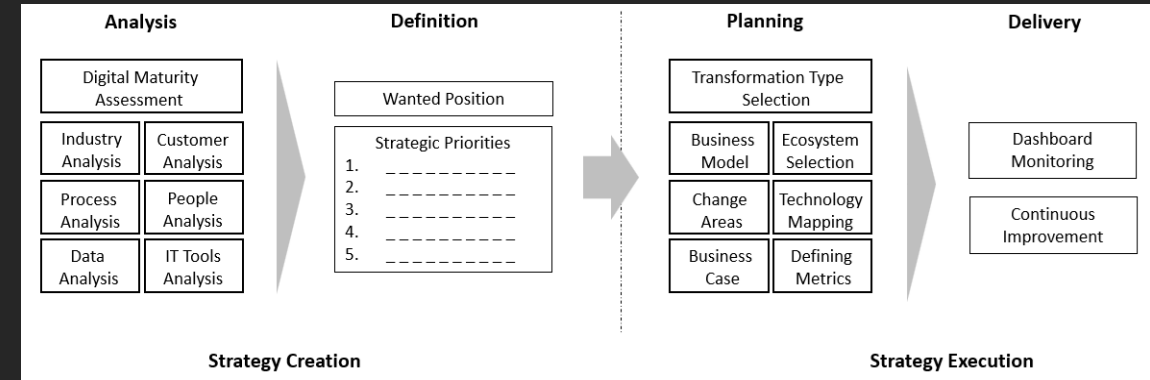

Solution

- GenAI Pilots should be selected with a scaling strategy
- Scaling strategy can be developed using Digital Strategy Framework.
- It is an end-to-end framework comprising strategy creation, strategy execution, along with wanted position and strategic priorities

Format

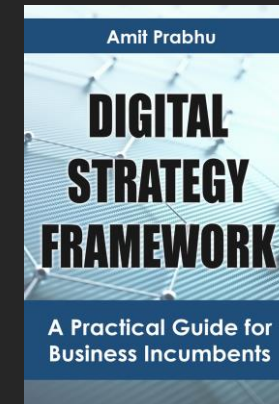

- Instructor-driven online or classroom-based
- Duration: 2 hours
- Target Audience: All Leaders/Managers at levels L1,L2,L3 and L4. strategists, transformation drivers, change agents, program/project managers

Digital Strategy Framework

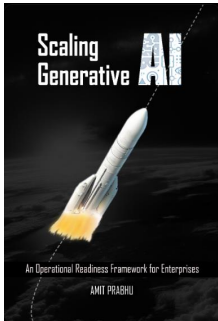

Facilitator

Amit Prabhu

Available on Amazon

A5

Operational Readiness Workshop

Based on Readiness Rocket Framework

Workshop

Problem

- Most of the global business incumbents have embarked on the AI/GenAI transformation journey
- As per a study by BCG, only 10% of them have scaled genAI, whereas 90% of them are still lagging
- This has caused a huge gap between scaling and lagging companies
- One of the key reasons for this huge gap is a lack of operational readiness, i.e most of the enterprises are not operationally ready to scale genAI

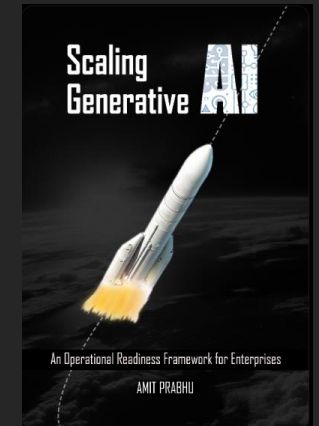

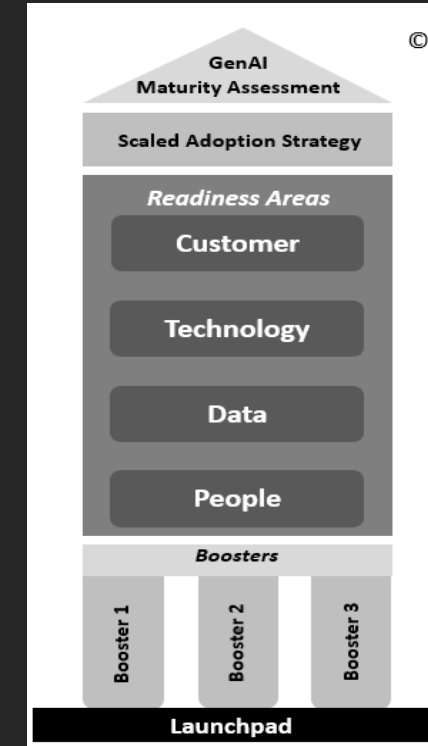

Solution

- Enterprises should implement the Operational Readiness, a.k.a Readiness Rocket Framework
- It comprises the 4 readiness areas, boosters, launchpad, strategy, and maturity assessment
- A convertible pilot or a genAI solution or MVP should be developed in parallel with operational readiness

Format

- Instructor-driven online or classroom-based
- Duration: 4 hours
- **Target Audience:** All Leaders/Managers at levels L1,L2,L3 and L4, strategists, transformation drivers, change agents, program/project managers

Readiness Rocket Framework

Available on Amazon

Facilitator

Amit Prabhu

A6

AI Compliance Advisory

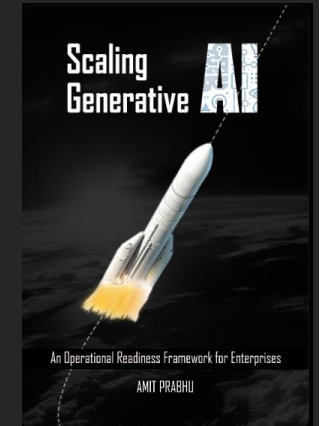

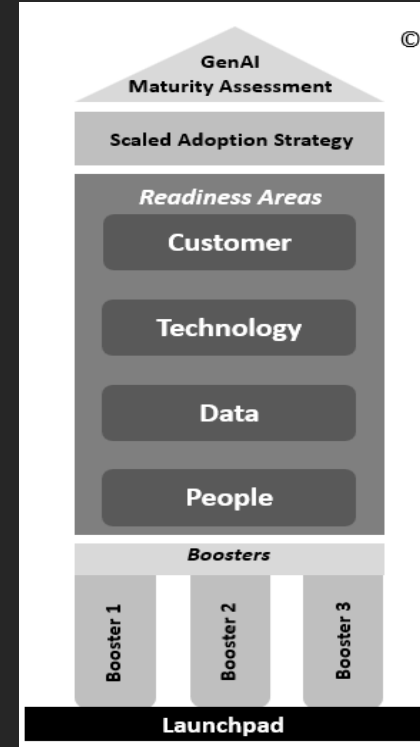

AI Audit, Risks, and Responsible AI Framework

AI Compliance Advisory

The service includes but not limited to:

- Why enterprises must invest in AI Compliance?
- Defining scopes of IT, DT, and AI
- Deploying Responsible AI (RAI) Framework
- Implementing AI Audit Framework
- Developing user defined AI audit controls
- Managing AI inventory
- Implementing AI compliance requirements for customer
- Implementing AI compliance requirements for vendors
- Calculating and mitigating AI risks
- Conducting an AI Audit: The five step approach
- Applying the EU AI Act (for EU Enterprises only)
- Building the AI Compliance team

Based on Readiness Rocket Framework

Available on Amazon

A7

AI Technology Advisory

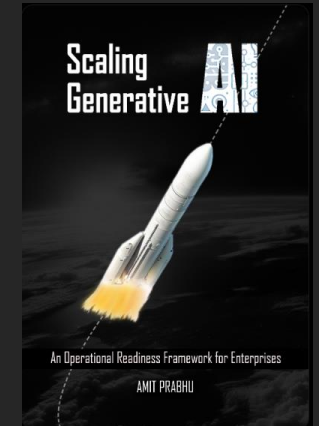

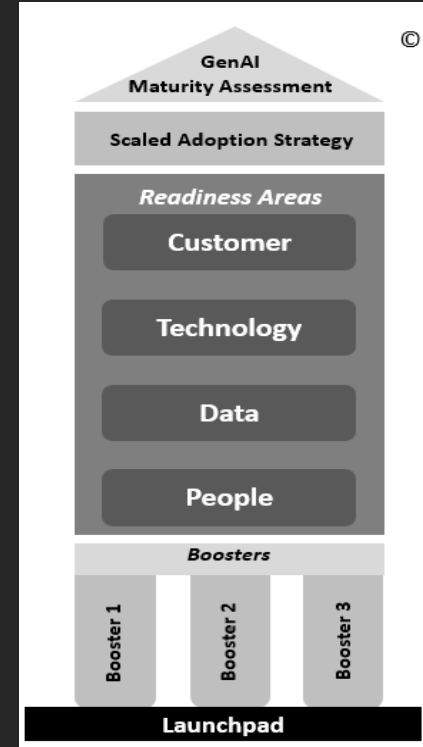

Building capabilities, apps, systems, products

AI Technology Advisory

The service includes but not limited to:

- Why enterprises must invest in AI?
- Helping a team or a unit identify the right AI use case based on business requirements
- Calculating productivity gains
- Developing business case
- Selecting LLMs
- Fine-tuning v RAG
- LLM curations
- Assessing infrastructure
- Managing technical debt
- Building AI capabilities, systems, and products
- Building technical competence
- Automating processes or workflows through AI agents

Based on Readiness Rocket Framework

Available on Amazon

A8

AI Hackathon

Brainstorming ideas and driving AI innovations

Hackathon

- Most organizations operate in silos—across teams and functions—with limited opportunities for business and technical stakeholders to collaborate on shared AI initiatives.
- This lack of cross-functional collaboration often slows down innovation, as ideas remain confined within teams instead of being developed collectively.
- The real need is a format that brings **business thinking and technical execution together in real time.**
- Our AI Hackathons are designed as high-energy, time-bound sprints where cross-functional teams collaborate to solve real business problems using AI.
- Business-focused hackathons help identify, refine, and prioritize high-impact use cases, while technical hackathons focus on building working prototypes and solutions.
- Participants work with modern AI tools and platforms such as Microsoft Copilot and Microsoft Copilot Studio to rapidly design, build, and test ideas.
- The outcome is not just learning, but **validated use cases, functional prototypes, and a clear path to scale AI within the organization.**
